Backend Development (AI/Backend) Assessment

1, Backend API Development
○ Description: Create a backend API to handle book information requests, and summary generation.
○ Requirements: ▢ Provide endpoints to fetch book information such as Book Title and Publisher and summaries.

2. AI Model for Audio Summaries

○ Description: Develop and integrate an AI model to generate summaries of books based on their text.
○ Requirements: ▢ Train a model to generate book summaries based on their text.
▢ Ensure the model can handle input text of varying lengths.
▢ Provide an API endpoint to accept book text and return a summary.

Note:
● **API Documentation:** Provide a Postman collection or Swagger documentation for the backend API endpoints.
● **Link in README:** Include a link to the Postman collection or Swagger documentation in the README file.

Video Demonstration
● **Record Video:** Record a short video (5-10 minutes) demonstrating the backend functionality and showing how API requests are handled.
